

1. Explain the following terms with appropriate example
 - ① body language
 - ② spatial zones
2. Advantage and disadvantage of questionnaires.
3. Define the following
 - ① proxemics
 - ② Brainstorming
4. Advantage and disadvantage of interviews.
5. How ORD differs from ERD

proxemics :- proxemics is the relationship between people and space around them. It is a factor that can be controlled by knowledgeable analyst.

fact finding method :- fact finding method is also called information gathering. There are seven fact finding method.

1. Sampling or existing documentation
2. Research and site visiting
3. observation on the work environment
4. questionnaires
5. interviews
6. prototyping
7. joint requirement planning (JRP)

Explain the following terms with appropriate example.

① Body Language

② Spital Jones

Body Language:- Body Language is a form of nonverbal communication. We actually use it but we are unaware of it. By research we know that, during communication people,

→ Verbally communicate (7%)

→ Tone of voice (38%)

→ Facial & Body Expression (55%)

There are three aspects of body language

1. Expression

1. Facial Disclosure:- facial expression is an important part of communication. Human face is extremely

expressive and convey/express countless emotion without

saying any words.

Eye contact :- Eye contact is another important element of body language. The way you look at someone can communicate many things.

Posture :- posture is also an important aspect of body language. Your posture says a lot about who you are and whether you should be taken seriously or not.

Spatial zones :- spatial zones are imaginary boundary between speakers and listeners. There are four types of spatial zones:

1. Intimate zone → closer than 1.5 feet
2. Personal zone → from 1.5 to 4 feet
3. Social zone → from 4 feet to 12 feet
4. Public zone → from, above 12 feet.

Questionnaires

Questionnaires are special purpose documents that allow the analyst to collect information and opinions from respondents.

Advantages :-

1. Can be answered quickly.
2. It is an inexpensive means of collection information.
3. Real facts expressed.
4. Response can be tabulated and analyzed quickly.

Disadvantages :-

1. Respondents often low.
2. No guarantee to get all the answer of question.
3. Not possible to read body language.
4. Good question are difficult to prepare.

Types of Questionnaires :- There are two types of questionnaires.

1. Free format questionnaire
2. Fixed format questionnaire

Free format questionnaires :- A question is asked and the response

will be recorded before asking new question.

Fixed format questionnaires :- Fixed format questionnaires

contains a set of pre selected question.

① Multiple-choice

② Rating question

③ Ranking question

Questionnaire procedure

1. Determine what facts and opinion you need to collect
2. Determine from whom you will get them.
3. Determine what type of questionnaires format you will use : free format questionnaires or fixed format.

4. Write the question

5. Record or write down the answer

6. Duplicate and distribute the questionnaires.

Interviews

Describe the advantage and disadvantages of interview.

Answer:- Interviews are face binding technique

where system analyst collect information from individuals by face to face interaction.

Advantages:-

1. opportunity to motivate interviewee
2. opportunity to get more feedback from interviewee
3. possible to read body language

Disadvantages:-

1. its a time consuming process
2. Success highly depends on system analysts human relation skill

Types of interview

unstructured interview :- unstructured interview are conducted with a specific subject in mind and some specific question.

structured interview :- structured interview are conducted with a specific set of question.

procedure to conduct interview

1. select interviewee
2. prepare for the interview
3. conduct the interview
4. follow up on the interview.

Types of questions to Avoid :-

- Loaded question (Do you have both at these on the report)
- Leading question (You are agree with it. Are you?)
- Biased question (How many money for this project? I think 1000)

Interview question guideline :-

1. Use clear and short language
2. Don't include your opinion as the part of the question
3. Avoid long or complex question
4. Avoid threatening question.

Interviews do or don't

Do	Avoid
1. Be polite 2. Listen carefully 3. maintain control 4. Observe mannerism 5. Be patient 6. keep interviewee at ease 7. maintain self control	1. continuing interviews unnecessarily 2. Avoid leading question 3. talking instead of listening 4. Tape recording - poor sign of listening skill

Define the following ① Brainstorming.

Brainstorming :- Brainstorming is a technique for generating ideas during group meeting. Participants are encouraged to generate as many ideas as possible in a short period of time.

Brainstorming Guideline :-

1. Isolate appropriate people that will be free from distraction.
2. Make sure everyone understands the purpose of the meeting.
3. Appoint one person to record ideas.
4. Within a specific period of time all the team members will generate their ideas as much as possible.
5. After that they will evaluate and analyze and evaluate the ideas.

Requirements

A system requirement is a description of what is needed and desire for an information system -

A requirement may describe functions, features, and constraints.

Type of function :-

Functional Requirement : Functional requirement is a feature that must be include in an information system.

Non functional Requirement : A non functional requirement is the description of the system.

DFD

ERD

1. It stands for Data Flow Diagram.

2. It represents the process and flow of data.

3. It explains input, output, and storing data.

1. It stands for Entity relation Diagram.

2. It represents the relationship between different entities.

3. It explains the relationship between entities.

Criteria to Define system Requirement:

1. Consistent (Reliable)

2. Complete

3. Required

4. Feasible

5. Accurate

6. Traceable

7. Verifiable
